

# Roll up banner

Uiteraard kijken wij eerst uw bestanden goed na voordat we het in productie nemen. De persoonlijke service die u van ons gewend bent.

## Algemene aanleverspecificaties

- Zet tekst in je ontwerp altijd om naar contouren/outlines.
- Formaat is 2000 mm hoog bij 800 mm. breed.
- Maak je bestand met een bleed van 3mm.
- Maak je bestand met extra ruimte boven en onder (5 cm) omdat de onderkant ingerold wordt in het systeem.
- Maak je bestand op in CMYK voor de juiste kleuren bij het eindresultaat.

# Roll up banner

We will always check your files before starting production. The personal service you've come to expect.

## General design specifications

- Visible size of banner: 80 cm wide x 200 cm tall or 84 cm wide x 200 cm tall.
- Add an extra 10 cm to the bottom of your design. This will be rolled into the display case.
- Add an extra 1 cm to the top of your design. This will be covered by the display case.
- Design your file with a bleed of at least 3mm. Allow your background to extend beyond the edge of your design, into the bleed. This is to avoid any white borders and to make sure your background flows nicely to the edge.
- Make sure all the text in your document has been converted to outlines.
- When using images in your file, we recommend a resolution of 300 DPI. As this isn't always possible we adhere to a minimum resolution requirement of 150 DPI. We advise you to not use files with a lower resolution as the print result will suffer for it.
- Minimum font size that we recommend is 12pt. Readability is highly dependent on the font that you choose.
- Make sure to use the CMYK colourprofile when setting up your document.
